Abstract

We describe the modern and dynamic infrastructure as code based system underlying operations of the Vera C Rubin Observatory. We will also cover or extra efforts to be NIST standard compliant for cyber security.

Keywords: Vera C. Rubin Observatory

1. Introduction

The Vera C. Rubin Observatory[1] will go in to operations in 2025. During commissioning we have already seen our infrastructure as code based cyber system working well. In this paper we will describe the generic underlying hardware, deployments on that hardware of both bare metal and containerized applications, transmission of data to SLAC and our NIST[?] compliant security approach.

Acknowledgments

This material is based upon work supported in part by the National Science Foundation through Cooperative Agreement AST-1258333 and Cooperative Support Agreement AST-1202910 managed by the Association of Universities for Research in Astronomy (AURA), and the Department of Energy under Contract No. DE-AC02-76SF00515 with the SLAC National Accelerator Laboratory managed by Stanford University. Additional Rubin Observatory funding comes from private donations, grants to universities, and in-kind support from LSSTC Institutional Members.
